

Netka's Mobile Application

Network Management at your fingertips

Mobile devices in today's high tech world is improving the lives as well as changing the life styles. Everyone have their own devices and can access to internet anytime, anywhere. These are good opportunities for organizations can provide better service for their clients via mobile application. As well as the network management system, which has to be monitored 24/7 as devices are scattered all over and when the problem occurs, if you are outside office, it is impossible to know where the source of problem is. Those problems can impact with time, may it consume lot of time, man power and money which will always have negative impact to your business.

Netka's Mobile App helps you to solve the above mentioned problems. We assure you that this will help you to monitor your networks 24/7 at your fingertip whenever and wherever you are just by using your mobile device you can cover up large area of networks.

We also want you to know that NNM Mobile App, NSM Mobile App and NSD Mobile App are now available for iOS, Android and Window mobile platform.

Using Netka's Mobile Application you can;

- Increase customer satisfaction by providing prompt service which can solve problem faster than those day
- Saving cost of service from increasing speed of service, increasing performance of staff without increase man power
- Convenience, easier and flexible for engineer and help desk
